

مباحث پیشرفته در فناوری اطلاعات جلسه دوم - رایانش ابری

مرتضی سرگلزایی جوان
مرکز تحقیقات رایانش

سرفصل مطالب

- بخش اول: مقدمه ای بر رایانش ابری
- بخش دوم: وضعیت رایانش ابری در ایران
- بخش سوم: معماری رایانش ابری
- بخش چهارم: ملاحظات طراحی مرکز داده
- بخش پنجم: رایانش ابری و کسب و کار
- بخش ششم: ارزیابی خدمات
- بخش هفتم: امنیت

رایانش ابری در رتبه اول ۱۰ مهارت برتر سال ۲۰۱۶ و ۲۰۱۷

- | | | | | |
|--|--|------------------------------------|----------------------|-----------------------------------|
| 1 Cloud and Distributed Computing | 3 Web Architecture and Development Framework | 5 User Interface Design | 7 Mobile Development | 9 SEO/SEM Marketing |
| 2 Statistical Analysis and Data Mining | 4 Middleware and Integration Software | 6 Network and Information Security | 8 Data Presentation | 10 Storage Systems and Management |

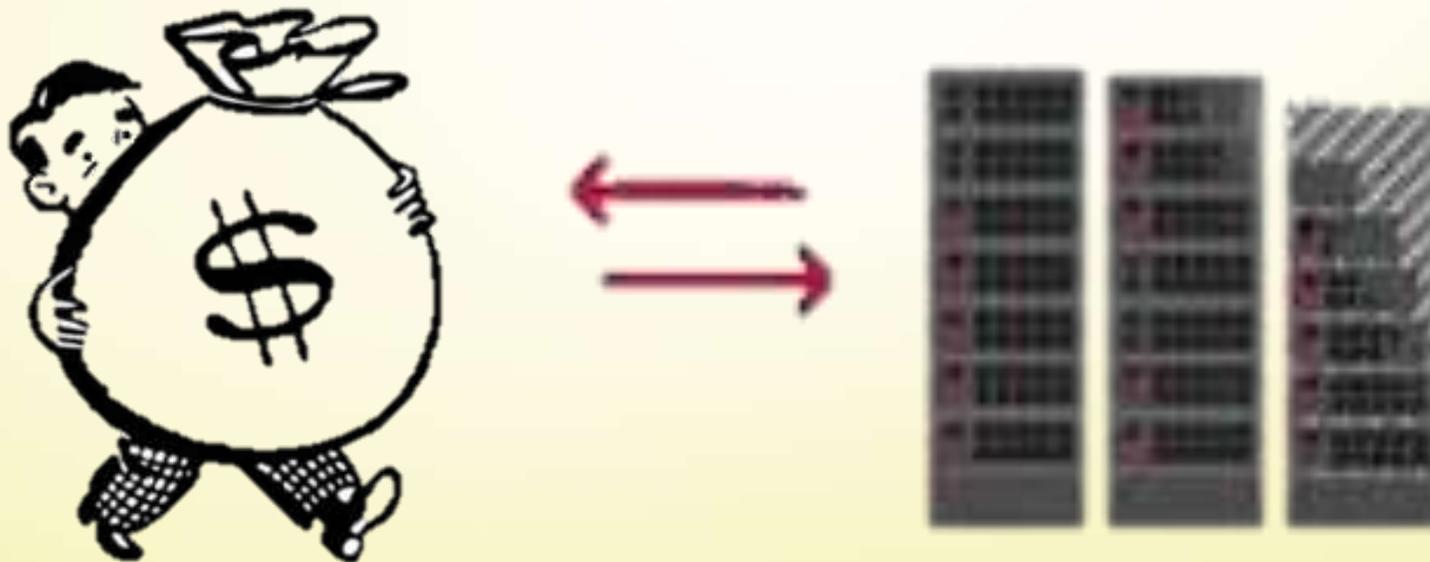

مثال: بانک BBVA

مثالی از بکارگیری رایانش ابری

طرح مساله (۱): هزینه های سرمایه گذاری

طرح مساله (۲): صرفه جویی در زمان

طرح مساله (۳): هدر رفت منابع

ممکن است منابع زیادی در اختیار داشته باشید، ولی ندانید که چگونه می توانید از آنها استفاده کنید.

صرفه جویی در هزینه

صرفه جویی در زمان

الگوی بهینه مصرف

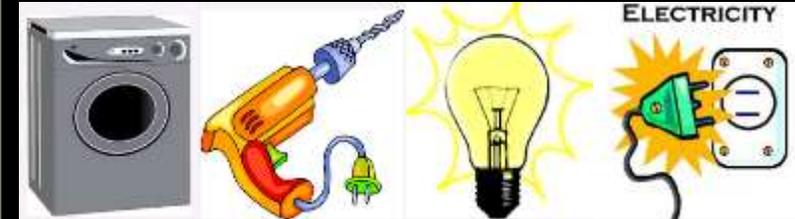

مثالی از بکارگیری رایانش ابری

طی ۱۵ الی ۲۰ سال آینده، استفاده از فناوری اطلاعات آنچنان فراگیر خواهد شد که پردازش محلی مقرون به صرفه نخواهد بود!

هزینه ایجاد زیرساخت ارتباطی
نسبت به استفاده از شبکه تلفن و موبایل

هزینه احداث چاه و تامین آب
نسبت به استفاده از شبکه آب

هزینه راه اندازی ژنراتور
نسبت به استفاده از شبکه برق

بخش سوم: معماری رایانش ابری

مرتضی سرگلزایی جوان
مرکز تحقیقات رایانش ابری

ITU-T Y3500 (ISO/IEC 17788): Cloud Definition

- “Paradigm for enabling network access to a **scalable and elastic** pool of **shareable** physical or **virtual** resources with **self-service provisioning** and administration **on-demand**”

Characteristics

- Resource pooling
- Broad network access
- Measured Service
- Multi-tenancy
- On-demand self-service
- Rapid elasticity and scalability

Resource pooling

- Physical or virtual resources can be **aggregated** in order to serve one or more cloud service customers; to **support multi-tenancy** while at the same time using **abstraction** to mask the complexity of the process from the customer. This offloads some of the customer's original workload, such as **maintenance** requirements, to the provider.

Examples of resources

- Servers
- Operating systems
- Networks
- Software
- Applications
- Storage

Broad network access

- Users can access physical and virtual resources from **wherever** they need to work, as long as it is network accessible, using a **wide variety of clients** including devices such as mobile phones, tablets, laptops, and workstations.

Measured service

- Usage can be **monitored**, **controlled**, **reported**, and **billed**. This is an important feature needed to optimize and validate the delivered cloud service. The customer may only **pay for** the resources that they **use**.

Multi-tenancy

- Within the context of multi-tenancy, the **group of cloud service users** that form a tenant will all belong to the same cloud service customer **organization**. Multiple tenants and their computations and data are **isolated** from and inaccessible to one another.

On-demand self-service

- Feature where a cloud service customer can **provision** computing capabilities, as needed, **automatically** or with minimal interaction with the cloud service provider

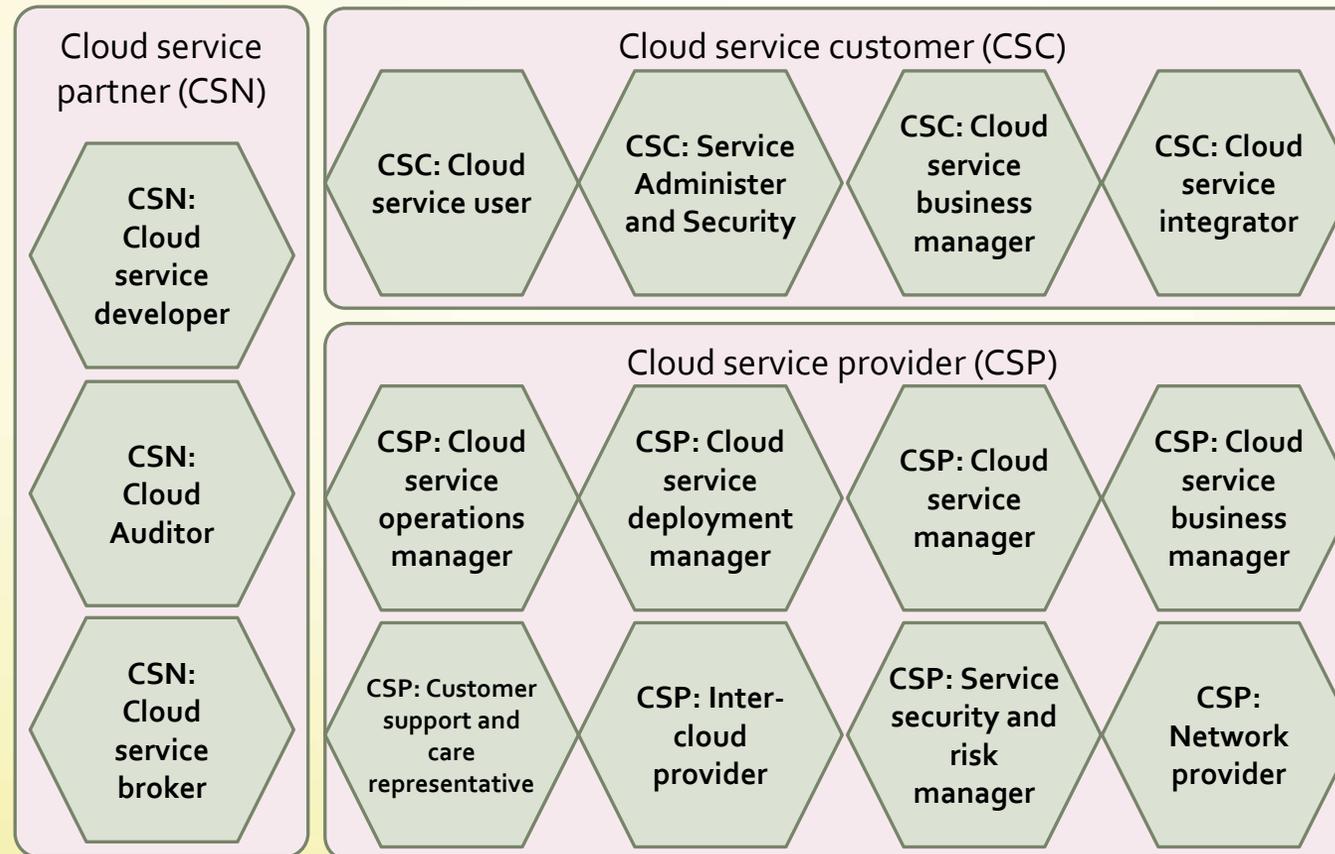

Rapid elasticity and scalability

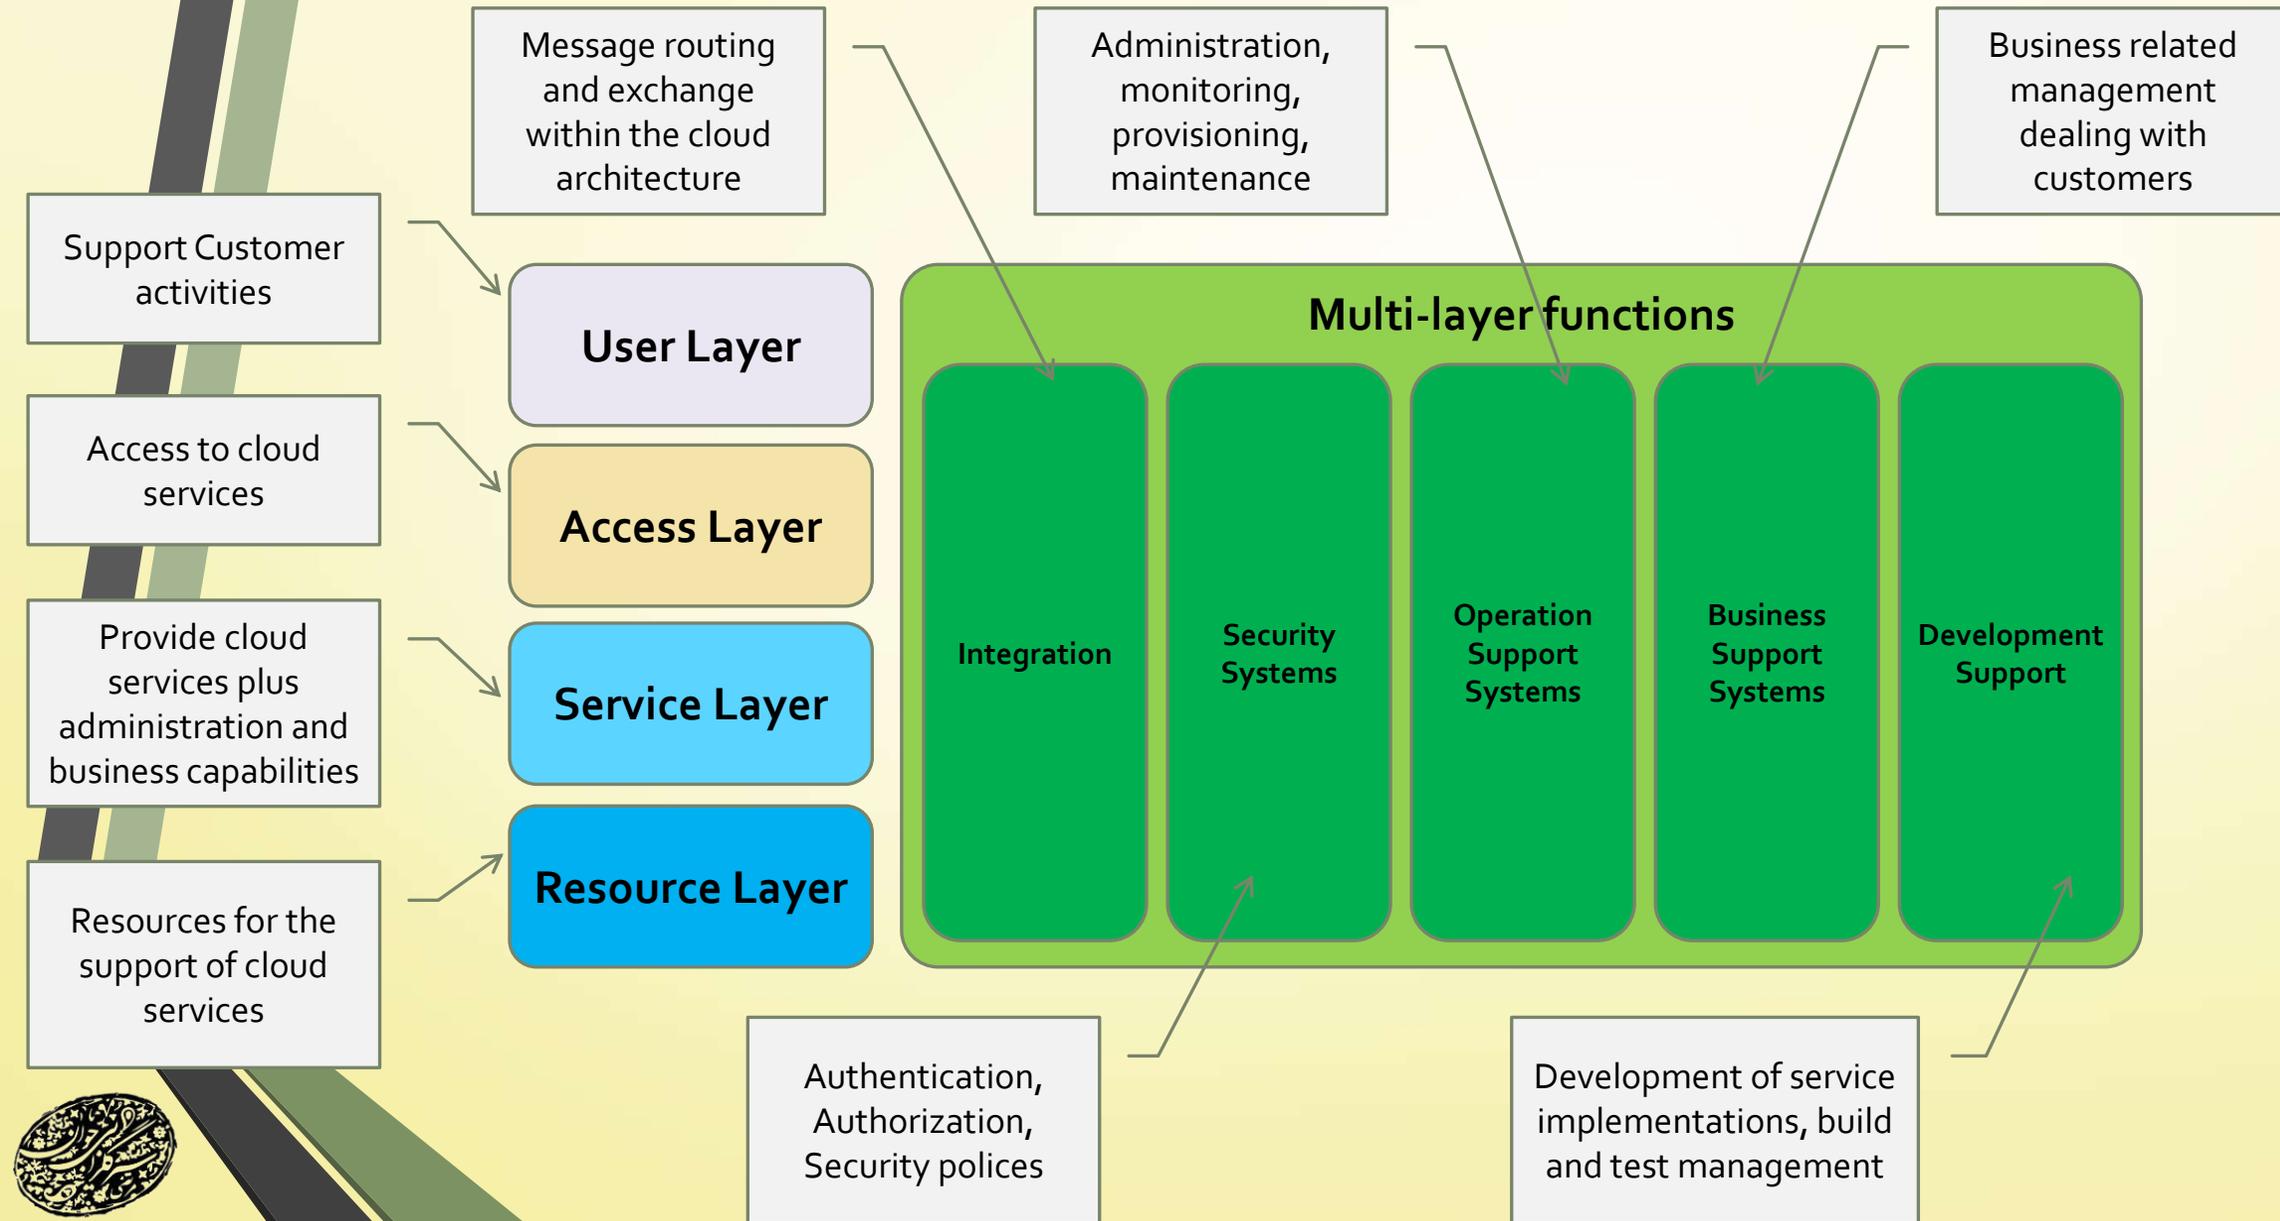

- A feature where physical or virtual resources can be rapidly and elastically **adjusted**, in some cases **automatically**, to quickly **increase** or **decrease** resources.

مثالی ساده از مقایسه دو مدل دریافت سرویس

- Traditional Model

- 100 servers * \$1,500 + 3 years * \$13,140 electricity/year +
3 years * 2 staff * \$100,000 salary/year = **\$789,420**

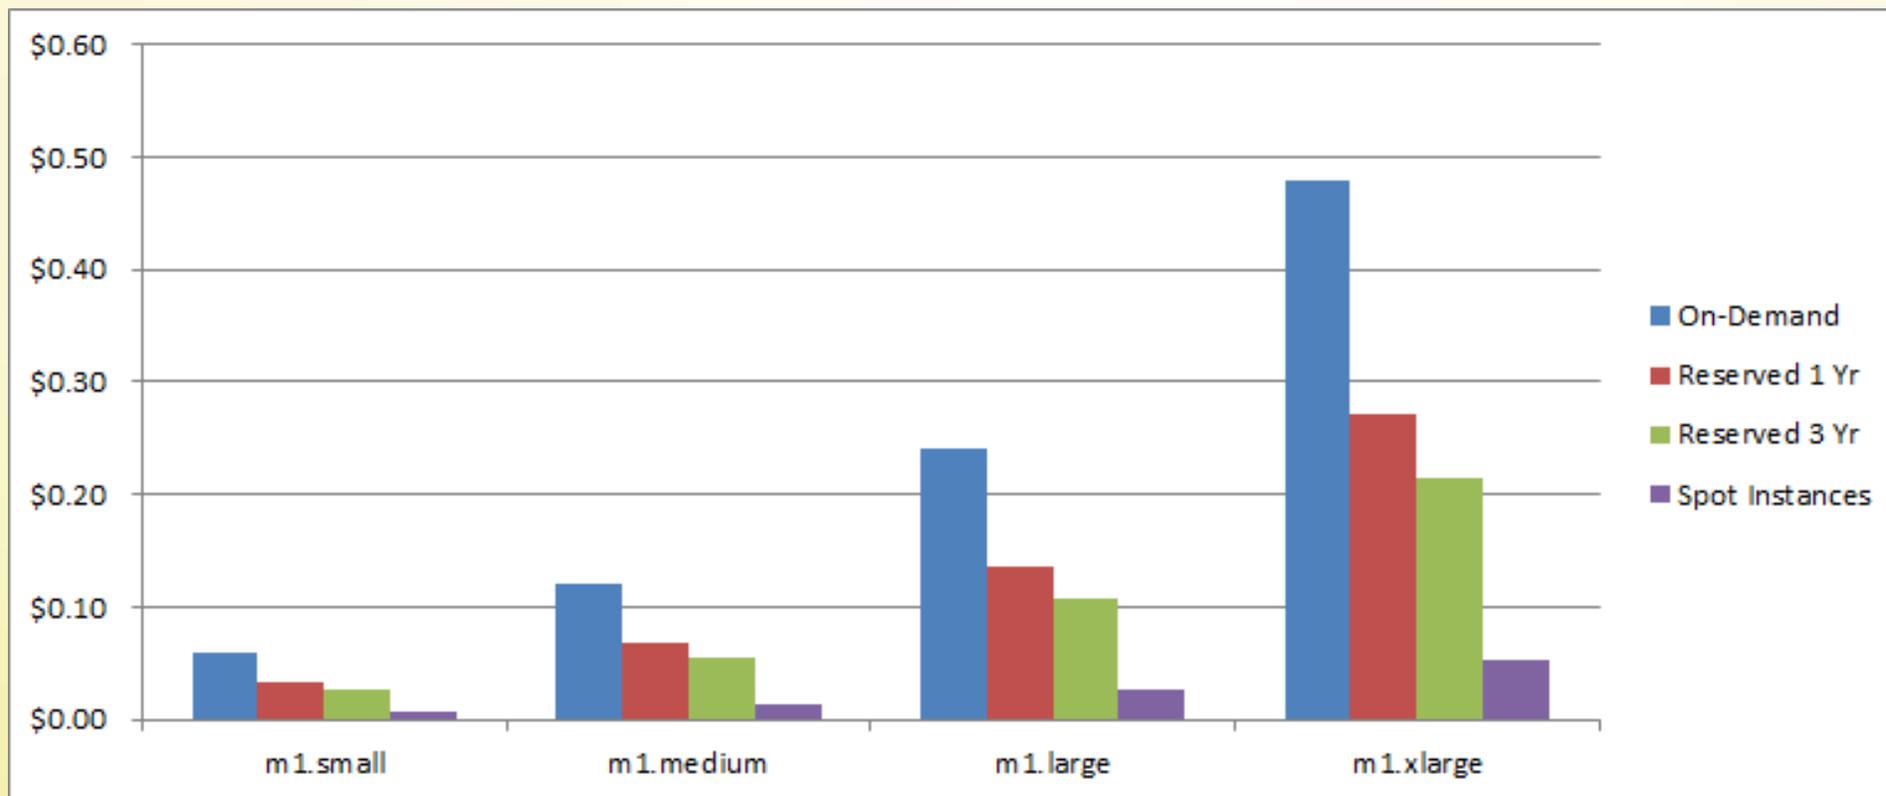

- Pay as you go Model

- 100 servers * \$0.40 instance-hour * 3 years * 8,760 hours/year = **\$1,051,200**

$$\mathbf{\$1,051,200 * 0.75\% = \$788,400}$$

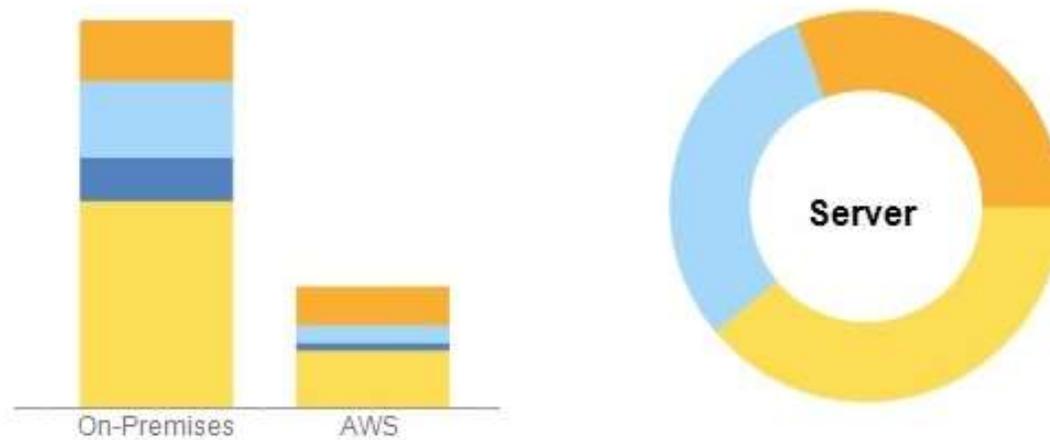

مثالی از تحلیل هزینه برای چهار روش دریافت سرویس

AWS TCO Calculator

You could save **69%** a year by moving your infrastructure to AWS.

Your three year total savings would be **\$ 654,904.**

<https://awstcocalculator.com>

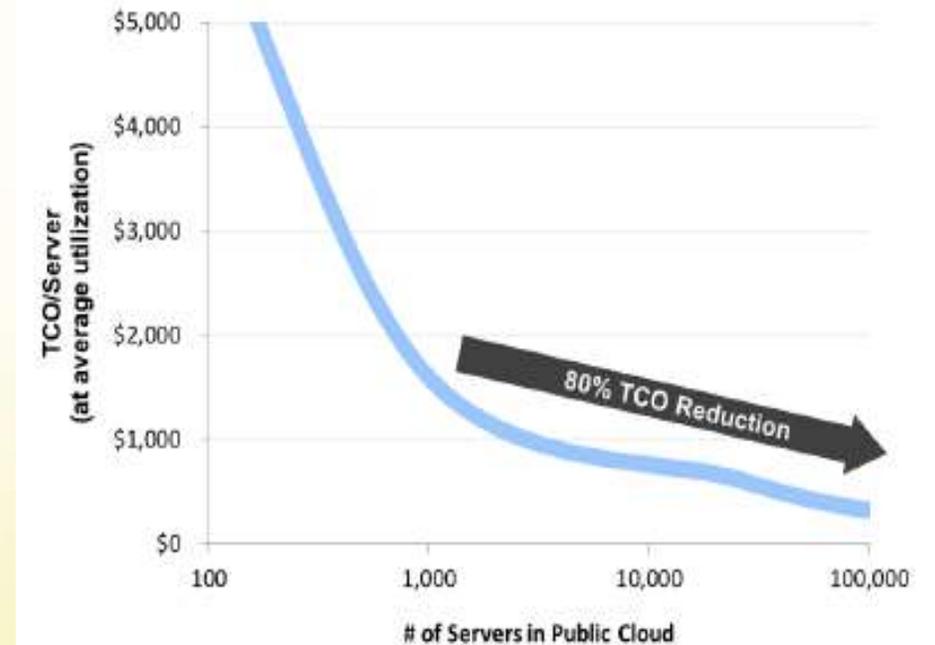

Economies of Scale

CSC Business View

- **TCO (Total Cost of Ownership)**
 - ... is simply the sum total of all associated costs relating to the purchase, ownership, usage, and maintenance of a particular product. Including hardware / software / maintenance (support, bug fixes, upgrade) / power / etc.
- **NPV (Net Present Value)**
 - ... time value of money
- **ROI (Return of Investment)**
 - ... justify (or deny) capital investments for IT.
- **IRR (Internal Rate of Return)**
 - is the interest rate at which the net present value of all the cash flows (both positive and negative) from a project or investment equal zero.

FIG. 15: ECONOMIES OF SCALE IN THE CLOUD

Source: Microsoft.

Basic Example of TCO Analysis

(Annual Total Cost of Ownership for a Single Disk Storage Unit)

Item	Annual Charge	Three-Year Charge
Disk storage	\$333,333.333	\$1,000,000.00
Maintenance	\$100,000.00	\$300,000.00
Facilities	\$10,000.00	\$30,000.00
FTE labor	\$150,000.00	\$450,000.00
Total	\$593,333.33	\$1,780,000.00

Source: Cisco, The Economics of Cloud Computing, 2012

TCO Calculators

AWS Total Cost of Ownership (TCO) Calculator

Use this calculator to compare the cost of running your applications in an on-premises or colocation environment to AWS. De on-premises or colocation configuration to produce a detailed cost comparison with AWS. You can switch between the basic a views to provide additional configuration details.

Select Currency: **United States Dollar**

What type of environment are you comparing against? On-Premises Colocation

Which AWS region is ideal for your geo requirements? **US East (N. Virginia)**

Choose workload type: **General**

Servers
Are you comparing physical servers or virtual machines? Physical Servers Virtual Machines

Provide your configuration details:

Server Type	App. Name	Number of VMs	CPU Cores	Memory(GB)	Hypervisor	Guest OS	DB Engine
Non DB		1 - 1000	1 - 32	1 - 256	VMware	Linux	

Total no. of VMs:

awstccalculator.com

Total Cost of Ownership Calculator

This calculator lets you analyze the total cost of ownership (TCO) for an on-premise software system and a Software-as-a-Service (SaaS) system. We've pre-populated it with an example case. Adjust those fields based on pricing details you receive from software vendors.

On-Premise vs. Software as a Service

Year 1 Cumulative Spend
On-Premise: \$116,500
SaaS: \$49,500

Year	On-Premise	Software as a Service
Year 1	\$116,500	\$49,500
Year 2	\$131,500	\$64,500
Year 3	\$146,500	\$79,500
Year 4	\$161,500	\$94,500
Year 5	\$176,500	\$109,500
Year 6	\$191,500	\$124,500
Year 7	\$206,500	\$139,500
Year 8	\$221,500	\$154,500
Year 9	\$236,500	\$169,500
Year 10	\$251,500	\$184,500

On-Premise License & Subscription

License type:	Perpetual	Subscription fee (annual):	\$25,000
License fee:	\$60,000	Subscription term in years:	3
Additional license costs each year:	\$6,000	Price increase at end of each term:	15%
Years until major upgrade:	5	Years until major upgrade:	0

Most on-premise systems are sold through a perpetual license; you pay up front and own a license to the system in perpetuity.

Almost all SaaS systems are sold on a subscription basis. Subscription terms range from monthly to annual to multi-year.

Case Study

- **Company XY**, a fictional **biotechnology** company with a proven track record of helping its customers reduce their time to market for **new drugs**. XY began life as a research firm **processing large clinical data sets** for companies. With the addition of new partners, XY began adding research and development as well as marketing and branding services.
- XY is now a full-service clinical research organization with an **employee base of 100 individuals** (including IT, sales, research, and design). XY has a **small data center** today where it hosts its customer databases, research libraries, and sales and finance applications.
- XY has **signed two major contracts** in the past three years, contributing to 100 percent revenue growth year over year. The company currently hosts **customer data in excess of 500 TB**, supported by a relatively small **IT staff of 20** engineers and developers. **Traffic** on XY's online portal (where the company shares data with development teams at partner firms) has **grown 60 percent** in the last two quarters.

Case Study

- To account for the servers and applications, I have added server hardware and maintenance and customer relationship management (CRM) software licenses. I have also included basic switching, routing, and load-balancing hardware for network access. Finally, I have increased the engineering FTE charges—six individuals at \$150,000 per year—to cover administration of the storage, network, server, and software platforms.
- The total annual run rate is \$1.97 million for the depreciation of all hardware and software (using straight-line depreciation over three years) and for facilities and labor expenses. XY's total cost of ownership over three years is \$5.91 million.

TCO Analysis: Traditional vs SaaS

Annual Total Cost of Ownership for Company X's IT Supply Chain			Annual Total Cost of Ownership for Company X's IT Supply Chain (SaaS)		
Item	Annual Charge	Three-Year Charge	Item	Annual Charge	Three-Year Charge
Disk storage	\$666,666.67	\$2,000,000.00	Disk storage	\$333,333.33	\$1,000,000.00
Disk maintenance	\$100,000.00	\$300,000.00	Disk maintenance	\$50,000.00	\$150,000.00
Facilities	\$30,000.00	\$90,000.00	Facilities	\$15,000.00	\$45,000.00
Full-time equivalent (FTE) labor	\$900,000.00	\$2,700,000.00	Full-time equivalent (FTE) labor	\$900,000.00	\$2,700,000.00
Firewalls and load balancers	\$10,000.00	\$30,000.00	Firewalls and load balancers	\$10,000.00	\$30,000.00
Network switches	\$10,000.00	\$30,000.00	Network switches	\$10,000.00	\$30,000.00
Server hardware	\$166,666.67	\$500,000.00	Server hardware	\$83,333.33	\$250,000.00
Server maintenance	\$20,000.00	\$60,000.00	Server maintenance	\$10,000.00	\$30,000.00
Software licenses	\$66,666.67	\$200,000.00	Software licenses	\$70,833.33	\$212,500.00
Total	\$1,970,000.01	\$5,910,000.00	Total	\$1,482,499.99	\$4,447,500.00

Source: Cisco, The Economics of Cloud Computing, 2012

ROI Analysis: Traditional vs SaaS

Software as a Service Cost Comparison

Item	Annual Cost/Savings	Three-Year Charge
Legacy-model TCO	\$1,970,000.01	\$5,910,000.00
SaaS-model TCO	\$1,482,499.99	\$4,447,500.00
Savings	\$487,500.02	\$1,462,500.00

\$212,500 Investment for New license

ROI = (Gains from investment – Costs of investment) / (Costs of investment)

ROI = (\$487,500.02 – \$212,500.00) / \$212,500.00

ROI = 129.41%

NPV = -\$212,500 + (\$487,500.02/1.1) + [\$487,500.02/(1.1²)] + [\$487,500.02/(1.1³)]

NPV = -\$212,500 + \$443,181.84 + \$402,892.58 + \$366,265.98

NPV = \$999,840.40

SaaS CRM upgrade Summarizes

Software as a Service Analysis Summary

Method	Payback	ROI	NPV
Value	5.23 months	129.41%	\$999,840.40

Tip: $\$212,500 / \$487,500.02 = 0.43$
 $0.43 * 12 \text{ months} = 5.23 \text{ months}$

- $Average\ versus\ Planned\ Provisioning\ Time = \frac{Average\ Provisioning\ Time}{Planned\ Provisioning\ Time}$
- UoM: Time, Ratio, Percent

Response Time

- *Average Response Time* =
$$\frac{\sum \text{Input Transaction Response Time}}{\text{Number of Transactions}}$$
- *Average versus Planned Response Time* =
$$\frac{\text{Average Response Time}}{\text{PlannedResponseTime}}$$
- UoM: Time, Ratio, Percent

System Throughput

- $\textit{Throughput} = \frac{\textit{Number of Transactions Proceed}}{\textit{Elapsed Processing Time}}$
- $\textit{Throughput against Capacity} = \frac{\textit{Actual Throuput}}{\textit{Planned Maximum Throuput}}$
- UoM: Transactions/time, Ratio, Percent

System Availability

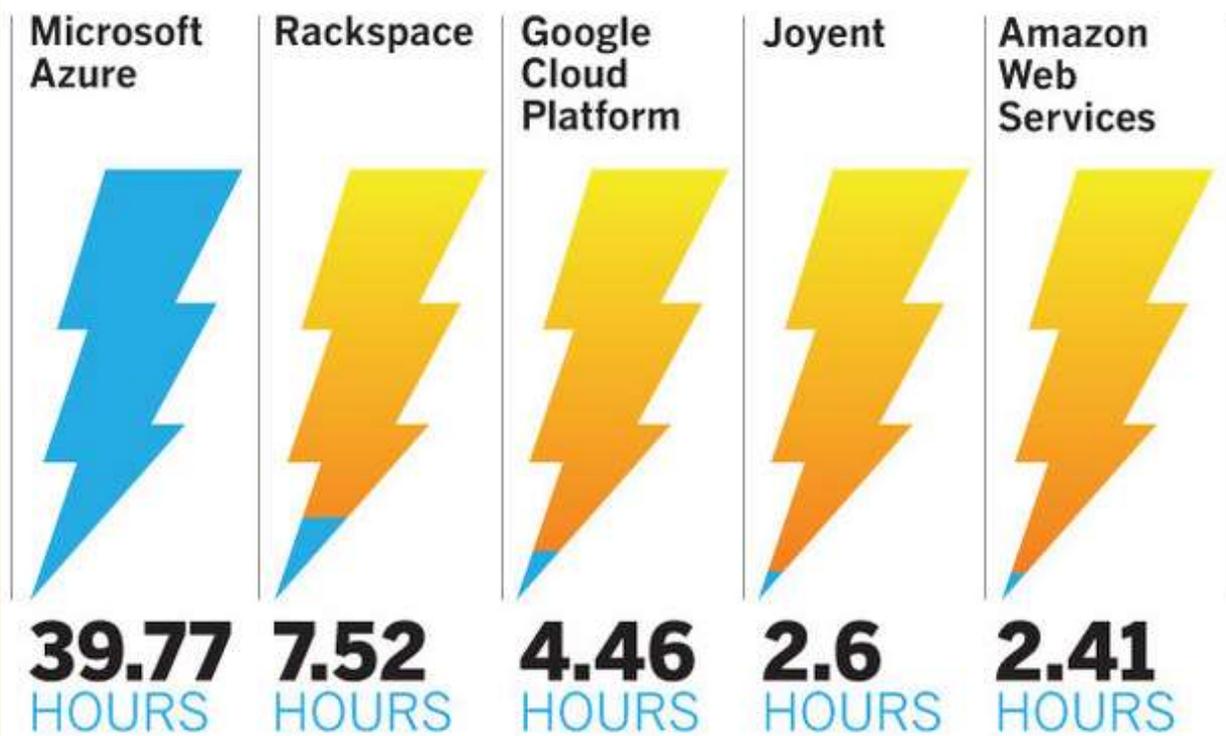

- $Availability = \frac{Actual\ Available\ Time}{Total\ Time}$
- $Availability = \frac{MTBF}{MTBF + MTTR}$
- UoM: Ratio, Percent

Availability	Down Time Annually
90.00%	36.5 days
95.00%	18.25 days
99.00%	3.65 days
99.90%	8.76 hours
99.99%	52.6 minutes
99.999%	5.26 minutes
99.9999%	31.5 seconds

System Availability

Downtime in 2014 of compute services (in hours)

End User / Cloud Operator

BUSINESS

SaaS

People & Organization

- Certification level
- Number FTEs per service support
- Number FTEs per service development
- Planned maintenance cycle
- Fractional skills
- Long tail partner ratio

PaaS

Financial

- Profitability of XaaS
- OPEX cost/ XaaS transaction
- Subscriber Revenue volume
- ARPU
- ARR
- Churn
- Growth Rate
- TCA
- B/E
- Amortization Ratio
- B/CR
- ROI
- NPV
- Incremental costs
- Increment benefits

IaaS

Market

- Market share
- CAPX versus OPEX ratio
- Custom / Standard Product Ratio
- Metering type volume
- Price Rate
- User experience rating
- Bounce Rate
- Social network interaction level
- Crowd Sourcing network size
- Price Discounting
- Subscription Pricing

Legal & Contract Management

- IP Share
- Custom / Standard Contract
- License amortization
- Direct / Indirect contracts
- Legacy Policy Compliance
- Sovereignty scalability
- Liability Penalties

Cloud Solution Provider / Designer / Builder

Churn Rate

- Churn Rate = $\frac{\text{Number of Cancellation and Changes}}{\text{Number of Customers} * \text{Months}} * 100\%$
- UoM: Ratio per unit time, Percent per unit time, revenue loss per service

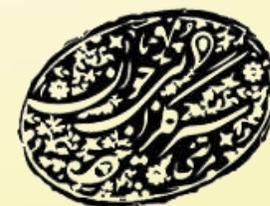

Legal Policy Compliance

- Policy Compliance Ratio = $\frac{\text{Number of Services that Must Comply with External Standards}}{\text{Total Number of Services}} * 100\%$
- UoM: Ratio, Percent, Currency Value

بخش هفتم: امنیت در رایانش ابری

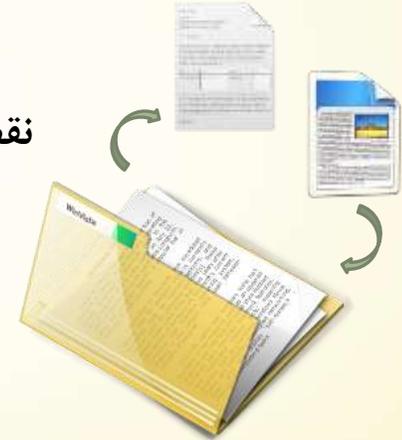

مرتضی سرگلزایی جوان
مرکز تحقیقات رایانش ابری

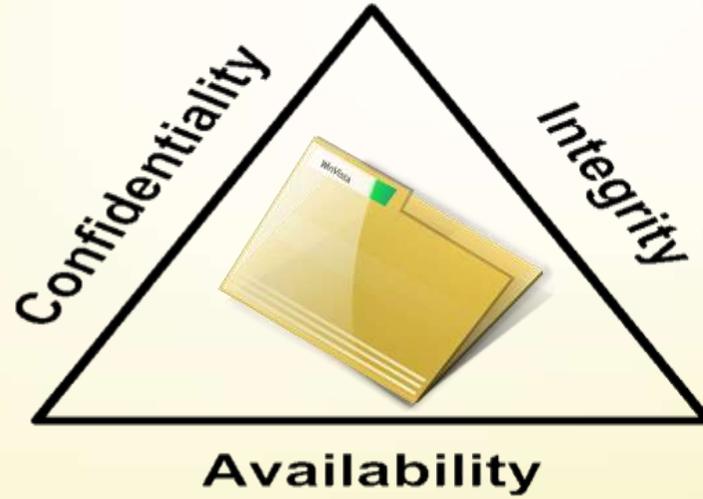

مقدمه

نقض محرمانگی داده

نقض صحت داده

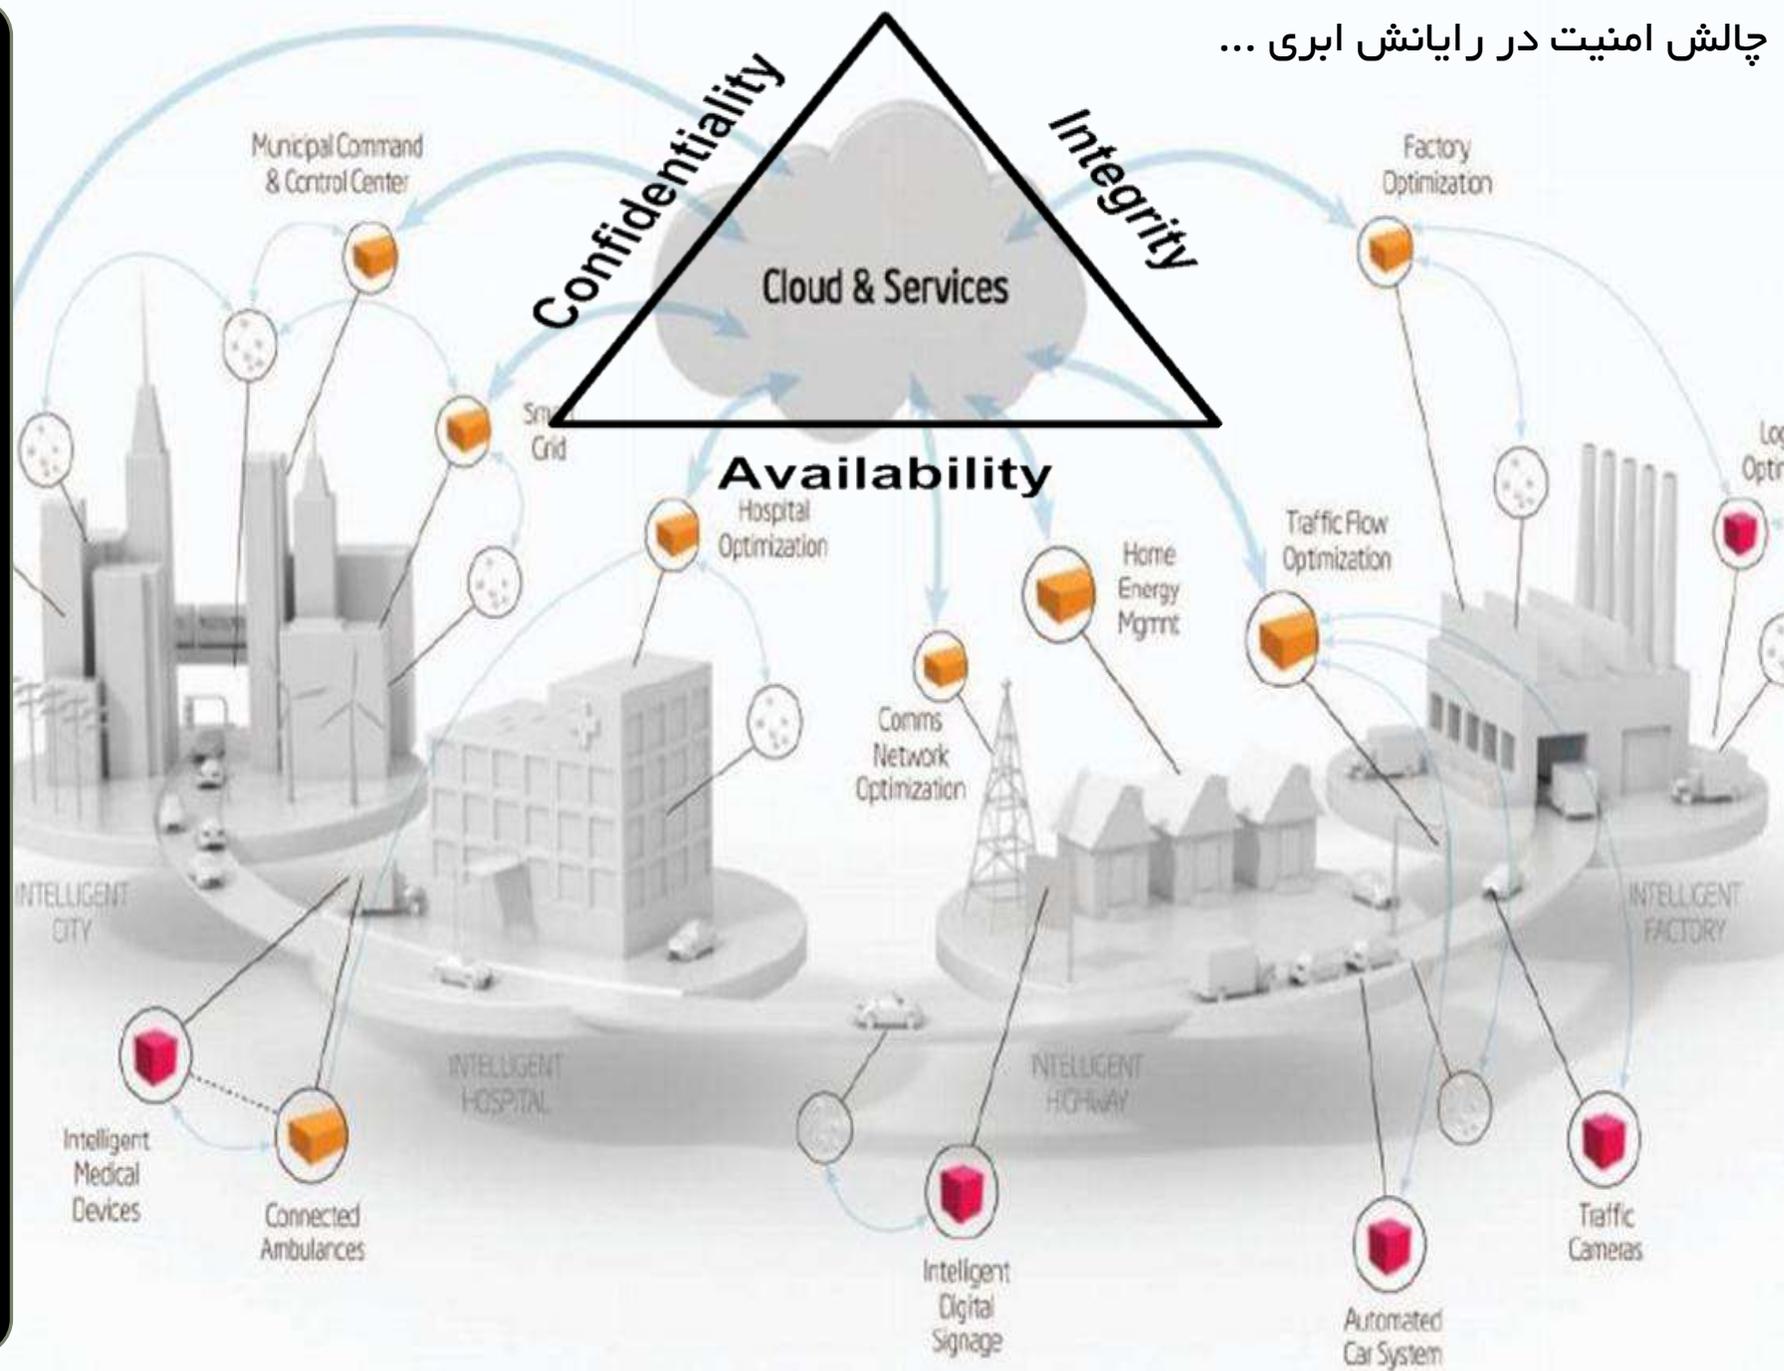

از دسترس خارج شدن داده

FULL STACK SECURITY

- Business / Process
- Application
- Data
- Runtime / API
- Middleware
- OS
- Virtualization
- Hypervisor
- Server
- Storage
- Networking

Smart banking

چالش امنیت در رایانش ابری ...

Smart Oil

Smart logistics

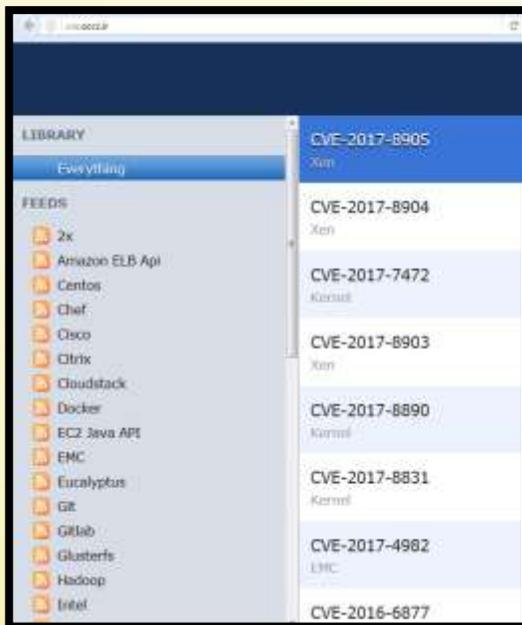

Smart consumer products

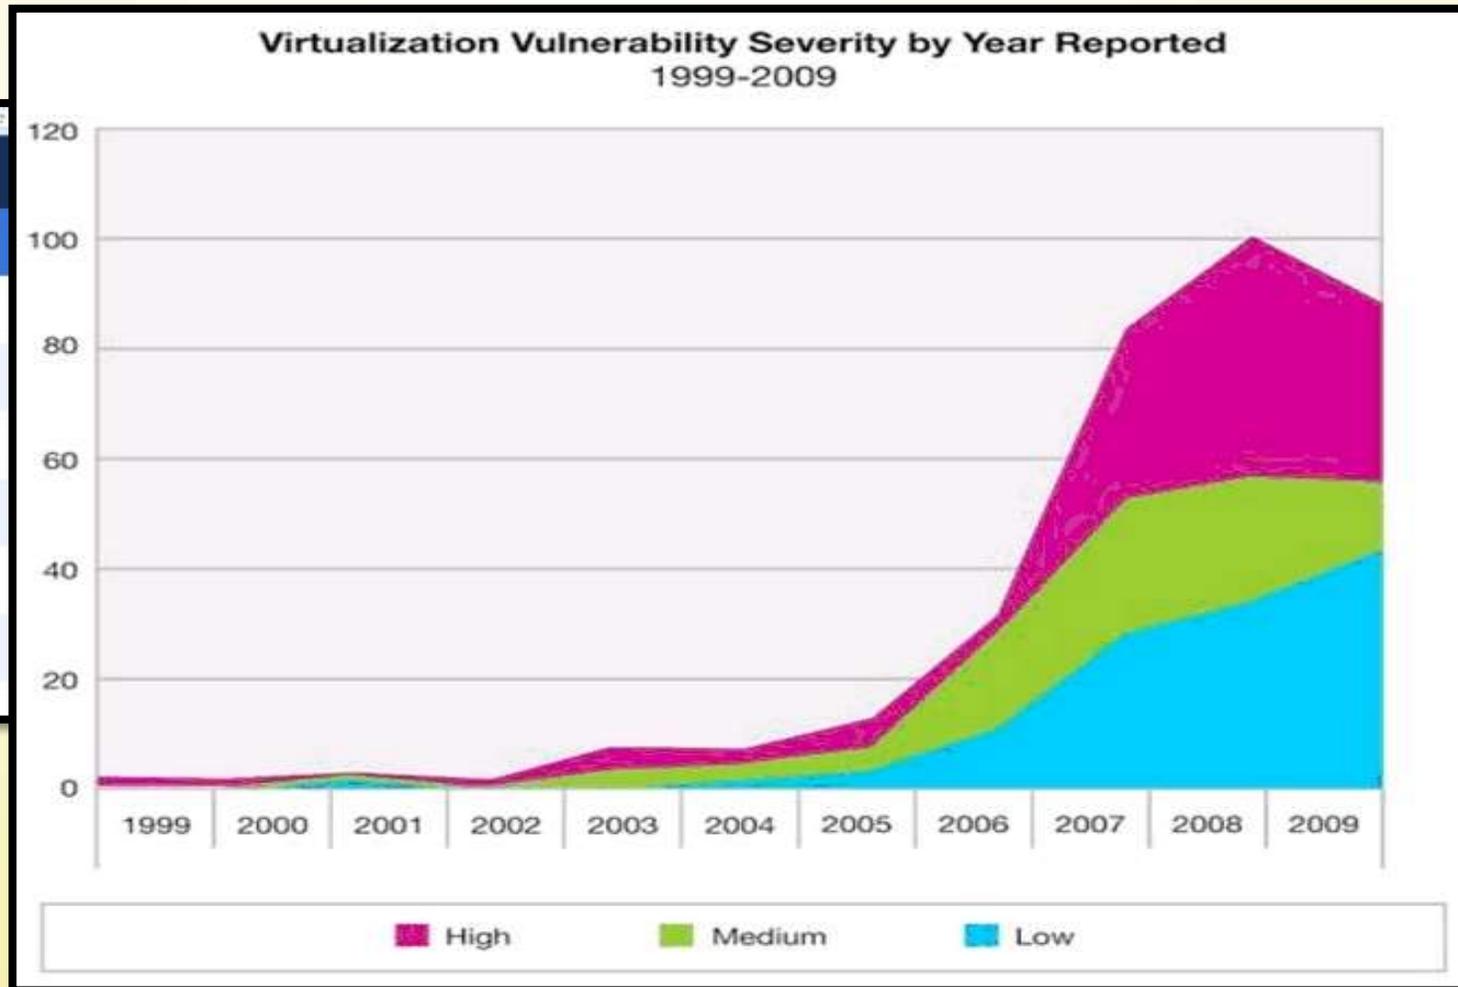

Smart agriculture

- Business / Process
- Application
- Data
- Runtime / API
- Middleware
- OS
- Virtualization
- Hypervisor
- Server
- Storage
- Networking

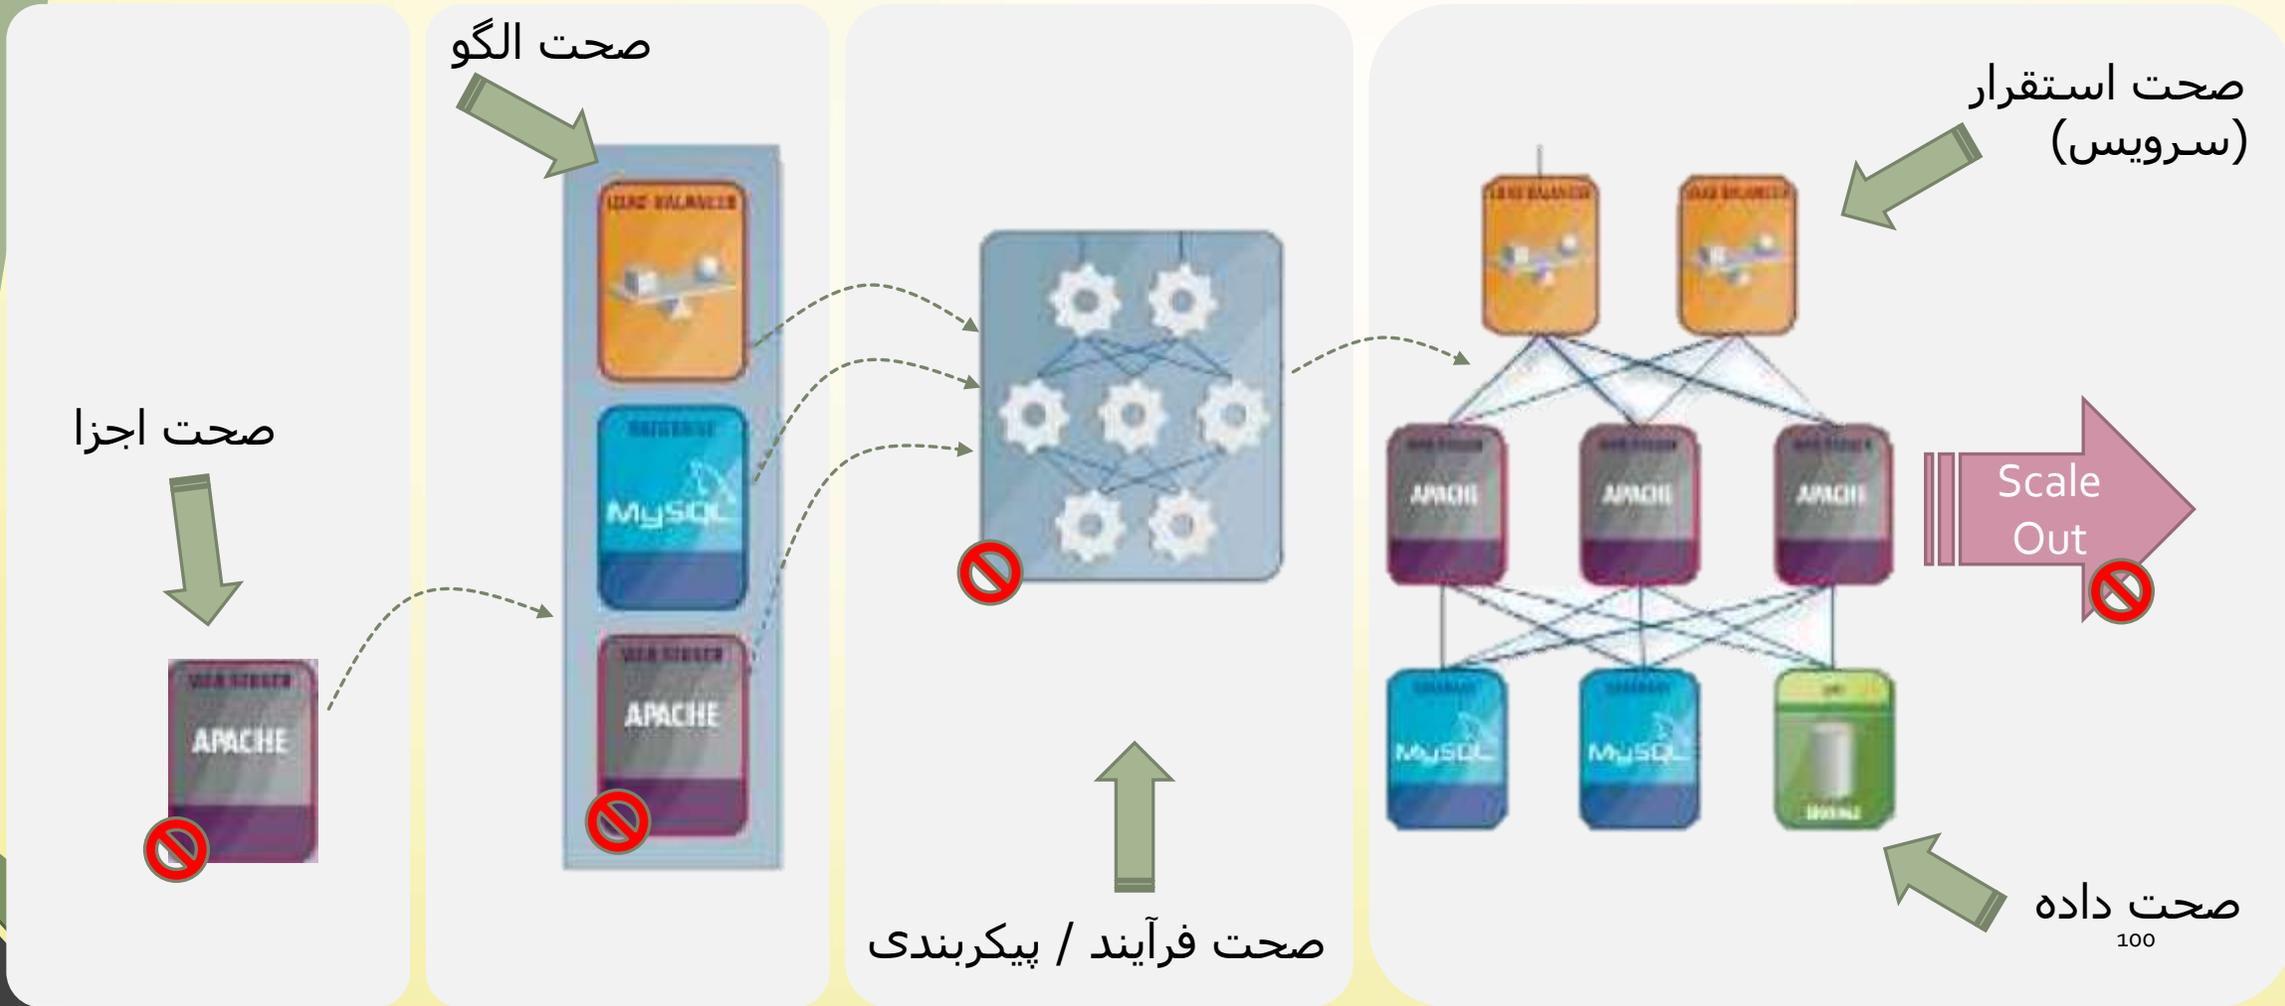

آسیب پذیری های امنیتی، با افزایش گرایش به مجازی سازی افزایش یافته است

حکمرانی قلمروی داده به این موضوع اشاره دارد که داده ها تحت قوانین و مقررات کشوری قرار می گیرند که در آن تولید یا پردازش می شوند. در این تصویر نمایی از پراکندگی جغرافیایی داده های ایران که در سرویس های مختلف ابری ایرانی میزبانی می شود نشان داده شده است.

رمز نگاری

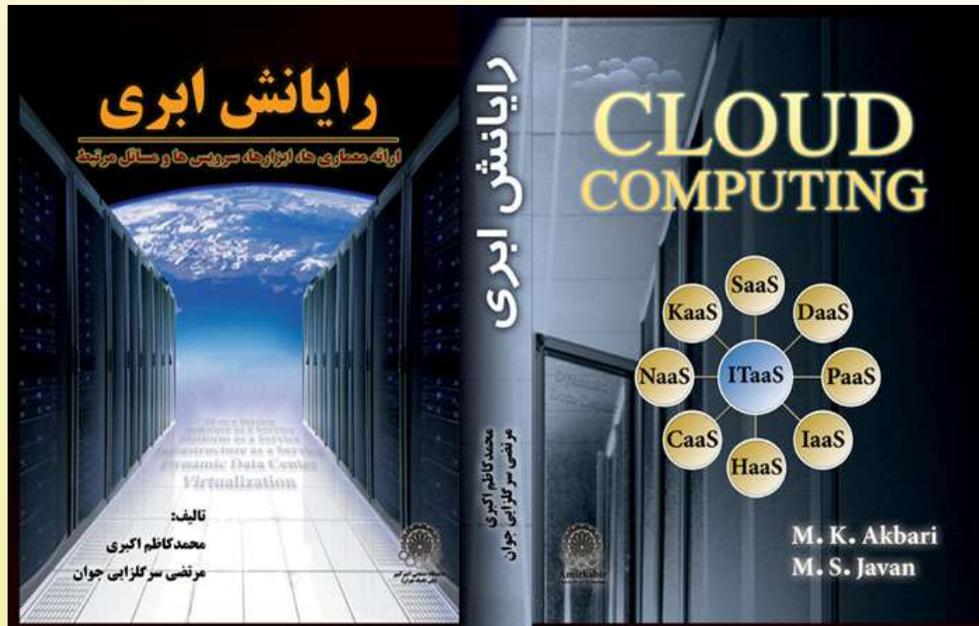

جمع بندی

- فلسفه و اهمیت رایانش ابری
- وضعیت رایانش ابری در ایران
- معماری رایانش ابری از دو نمای کاربری و کارکردی
- ملاحظات فنی در طراحی مرکز داده
- محاسبات اقتصادی رایانش ابری
- روش های ارزیابی خدمات ابری
- مسائل و مخاطرات امنیتی رایانش ابری
